1. Receipt is acknowledged of the prior art information disclosure statement filed March 05, 2002.

2. Claims 21-23 are pending in this application which is a divisional of 09/353,445 filed 07/14/1999, now U.S. Patent 6,376,213.

Claims 1-20 have been cancelled.

3. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claims 21-23 are rejected under 35 U.S.C. 101 because the microorganisms as claimed read on a product of nature.

Applicant can amend the claims by any limitations to overcome the above e.g., --  
-a biological pure isolate----.

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 21-23 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Endo et al, U.S. 5,707,836.

The reference teaches an Arthrobacter Strain KK-3 which has essentially the same properties as disclosed in the specification on pages 9-10 which includes the following:

“Morphology polymorphic bacilliform Gram staining + Spore - Mobility  
Require for free oxygen aerobic Oxidase - Catalase + Color of colony no characteristic color Acid fastness - Rod-coccus cycle + Elongation around colony none Diamino acid of cell walls lysine Glycolyl test - (acetyl type) Arabinogalactan polymer - (estimated from of cell walls acid hydrolyzate of all cells) Quinone system MK-9(H.sub.2), 8(H.sub.2) GC content of DNA (mol %) 65 (HPLC method).”

It is presumed that the reference species is the same or that there is no patentable distinction between the two in accordance with the following decisions:

It is well settled that if a reference reasonably teaches a product which is identical or substantially identical or are produce by identical or substantially identical process, the PTO can require an applicant to prove that the prior art products do not inherently possess the characteristics of his claimed product. A rationale given for shifting the burden of going forward to applicant is that the PTO does not possess the facilities to manufacture or to obtain and compare prior art products, see In re Brown, 459 F.2d 531, 535,173 USPQ 685, 688 (CCPA 1972); In re Best, 562 F.2d 1252, 1255,195 USPQ 430, 433-434 (CCPA 1977).

5. The specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.
